Stakeholder Requirements Document

BI Professional: Hasna AIT BOUI

Client/Sponsor: Retail chain Company

The management of the retail chain needs a BI tool to track store performance and profitability, while gaining insights into customer segmentation and demographics. It also needs visibility into product and category sales trends to build targeted marketing strategies and continuously improve store performance and profitability.

Stakeholders:

- Chief Revenue Officer (CRO)
- Head of Marketing
- Regional Store Managers
- Product Category Managers
- BI Director

Stakeholders will use the BI tool as follows:

- **CRO:** Track revenue status, profitability, and discount impact.
- **Head of Marketing:** Gain insights into customer segmentation and demographics and use them to build marketing strategies for campaign targeting.
- **Regional Store Managers:** Monitor store performance and compare stores to identify which ones need intervention.
- **Product Category Managers:** Track sales and profitability trends by products and categories.
- **BI Director:** Validate automated data updates, ensure strict role-based access control, and monitor tool performance.

The BI Tool should:

- Display top products and categories ranked by both revenue and profit.
- Provide visualizations of sales trends over time (daily, monthly, and quarterly).
- Compare store and regional performance to identify top and underperforming locations.
- Analyze the impact of customer demographics (age, gender, city) on overall sales.
- Track how promotional discounts affect revenue and net profit margins.
- Show key customer metrics, including average order value (AOV), customer lifetime value (CLV), and repeat purchase behavior.
- Identify the most frequently used payment methods.
